

RB3D

May 11, 2023

The 13th of March, our class visited the RB3D company which was founded in 2001 by Serge GTYGOROWICZ. Thanks to the kindness of the work team and their warm welcome, we were able to discover their creation. In fact, they create a lot of exoskeletons in order to help the physical job and avoid back pain by sending all effort in the legs. It's a very interesting invention! After the visit we had the right to a little snack... It was a very good surprise! We thank Mr. GTYGOROWICZ for having agreed to present his job to us.

Directed by GARRAB Hanaé and ABRAHAM Jeanne
