

we multiply your capacity

On the 13th of March, the society RB3D received our class in order to learn more about exoskeletons. Indeed, RB3D is a company which makes exoskeletons and which was founded by M. GRYGOWICZ in 2001. His team revealed to us the secrets of their work. First of all, it isn't only some fitters and machines that create exoskeletons. The last exoskeleton they created is the Exoviti which allows alleviation to support the back in the vines. We had the chance to try it. It's really impressive. The advantages of the exoskeleton are that he helps on the physical part of the job and avoids back pain by sending all effort in it. To finish, we had the opportunity to have a snack, a big snack !!!!!!!!!!!!!!! It was a really good idea.

We thank M. GRYGOROWICZ and his team for allowing us to discover this company and for all the efforts they made to make our visit at RB3D a moment that we will always remember.

Marie-Alix FRAPPART and Theodora SARZEA
