

RB3D : A business who acts for the future

A winemaker using the Exovitty

A man using the Exoback

RB3D is a business who multiply your capacity !

RB3D is a business based in Monéteau, Yonne since 2001. This business products exoskeletons for the physical jobs and they are named Exoback, Exopush and Exovitty like the Exovity is made especially for winemakers.

Actually, we visited this factory with our class and our teachers : miss Juillion and Mr Brihaye, in order to see all the different exoskeletons and bots. We've even been able to try the exovity ! We learned that RB3D also makes cobots, they are kind of robotic arms who help to lift a grinder. These cobots are very useful because a grinder is heavy and dangerous by making vibrations (vibrations are dangerous if you are exosed to them for a too long time)
