### THEMES

The visit and the presentation of the manager

### PLOT

The 13th march 2023 our class visited the premises of the company RB3D. Of all our visit there is something that has particularly marked us, the presentation of the manager Serge Grygorowicz. But before talking to us, he gave us a tour of the company and it was very cool and clean. After the tour, we've been separated in three groups and our group began with Serge Grygorowicz. He speaks us about his company. We learn that the company was founded in december 2001 in Monetau by him and his friends. We also learn that they have an income of 1,5 millions euros. They receive help from Spanish, their goal is to create robots flexible and who reduce pains, all of this in order to help people who work in the vineyards or in the construction sites. They have 110 exopush, 50 robots, exoskeleton, exoback, grinding. Their customers are Auto, Aero, metals and glass. To conclude, it was a great experience and we will not forget it !
